

İlker Uğur Kaya

Mobile & Backend Engineer · DevOps Enthusiast

✉ kayailkercontact@gmail.com | 📧 [kayailkerugur](#) | 🌐 İlker Uğur Kaya

Summary

Software engineer specializing in iOS and backend development, experienced in designing and building scalable, production-ready applications. Proficient in SwiftUI, Spring Boot, and Node.js, with practical knowledge of DevOps workflows including containerization and deployment. Focused on clean architecture, system design, and building secure, maintainable software systems.

Skills

Languages: Swift · Java · JavaScript · TypeScript · SQL

Mobile Development: SwiftUI · UIKit

Frontend: Angular

Backend: Spring Boot · Node.js · Express.js · REST APIs

DevOps & Infrastructure: Docker · Redis · PostgreSQL · Liquibase

Security: JWT · End-to-End Encryption (AES-GCM, ECDH) · TLS/HTTPS

Search & Realtime: Elasticsearch · WebSocket (Socket.IO)

Tools & Others: Git · MapStruct · Lombok · Thymeleaf

Work Experience

Detaysoft

iOS Developer

Sivas/TR

Dec. 2022 - June. 2024

- Developed high-performance, scalable mobile applications using Swift
- Designed user-friendly and visually appealing interfaces using SwiftUI and UIKit
- Built applications following MVVM and MVC architectural patterns to ensure maintainability
- Implemented data management and performance optimizations using CoreData and Realm
- Improved development processes by leveraging modern Swift features and design patterns
- Identified and resolved performance and memory management issues
- Participated in the full lifecycle of App Store deployment and release processes

Enqura

iOS Developer Intern (15 Days)

İstanbul/TR

Jan. 2025 - Feb. 2025

- Conducted practical implementations in network security and secure communication protocols
- Implemented SSL control mechanisms to ensure secure communications
- Developed and maintained network control classes for robust system connectivity
- Gained hands-on experience with software frameworks and integrated them into development workflows
- Utilized logging tools to monitor application behavior and facilitate debugging

- Developed a full-stack application using Angular (frontend) and Node.js (backend)
- Implemented WebSocket (Socket.IO) based real-time communication for instant data synchronization
- Designed and built a document search system using Elasticsearch, enabling full-text search over PDF files
- Implemented PDF parsing and content extraction pipelines to transform unstructured data into searchable formats
- Designed optimized Elasticsearch index mappings to improve search performance and relevance
- Built RESTful APIs with Node.js and Express.js for data processing and system integration
- Implemented end-to-end encryption (E2EE) using AES-GCM and ECDH key exchange, ensuring secure real-time communication
- Designed secure key management and encryption flows for client-server communication
- Managed secure connections using HTTPS, TLS, and authentication mechanisms
- Containerized services using Docker and configured development environments
- Debugged and resolved issues related to networking, certificates, and real-time communication systems
- Applied logging and monitoring strategies to improve system observability and debugging

Projects

TripMate – Travel Planning Application

iOS · Backend · DevOps

- Developed and published a production-ready travel planning application on the App Store using SwiftUI
- Designed and implemented a scalable backend using Spring Boot, handling user data, routes, and social features
- Built RESTful APIs and integrated them with the mobile client for seamless data synchronization
- Implemented JWT-based authentication and refresh token mechanisms for secure user sessions
- Integrated Google Maps and location services for route planning and location-based features
- Designed and managed relational data using PostgreSQL, including optimized queries and data structures
- Utilized Redis for caching and performance optimization in backend services
- Containerized backend services using Docker and managed deployment workflows
- Designed a modular system architecture supporting mobile, backend, and service integration
- Implemented user-generated content features such as posts, likes, and comments
- Applied security best practices including authentication, authorization, and data validation
- Managed application lifecycle including App Store deployment, updates, and versioning

Auth Service – Secure Authentication & User Management System

Backend · DevOps

- Designed and developed a production-ready authentication system using Spring Boot and Spring Security
- Implemented user registration with email verification and secure login mechanisms
- Built JWT-based authentication with refresh token support for session management
- Developed password reset flows (token-based and secure recovery mechanisms)
- Created /me endpoint for retrieving authenticated user profile data
- Implemented profile image upload, retrieval, and deletion using multipart REST APIs
- Designed account deletion flow with delayed removal (30-day retention policy)
- Implemented logout and token invalidation system using Redis-based blacklist
- Developed HTML email templates for verification and password reset using Thymeleaf
- Designed clean architecture using DTO-Entity mapping with MapStruct
- Ensured secure communication and authorization using token-based access control

Education

Sivas Cumhuriyet University

B.S. in Computer Engineering.

Sivas/TR

Sep 2022-July 2026

- Pursuing a degree in Computer Engineering with a focus on software development and system design

Sivas Cumhuriyet University

Double Major (D.M.) in Electrical and Electronics Engineering

Sivas/TR

Sep 2023-July 2027

- Completed coursework in electrical systems, signal processing, and engineering fundamentals

Languages: Turkish (Native) · English (B2/C1) · Russian (A1) · German (A1)
