

İlker Uğur Kaya

iOS & macOS Engineer • Backend & DevOps • Open to Relocation

kayailkerugur@gmail.com | ilkerkaya.me | github.com/kayailkerugur | linkedin.com/in/ilker-ugur-kaya

SUMMARY

Software engineer with 3+ years of Apple-platform development (iOS & macOS) and 1.5+ years of professional experience shipping production applications. Published TripMate, a travel-planning app live on the App Store, and built a native macOS AI client with a reusable Swift SDK. Backend experience with Spring Boot and Node.js: JWT/OAuth 2.0 authentication, PostgreSQL, Redis, and Docker deployments self-managed on a VPS. Hands-on with end-to-end encryption, real-time systems, and CI/CD in security-focused environments. B.S. Computer Engineering (2026); open to international roles and relocation.

SKILLS

Languages	Swift • Java • JavaScript • TypeScript • SQL
Apple Development	SwiftUI • UIKit • Swift Concurrency • Combine • Core Data • Realm • URLSession • Keychain • AVFoundation • Speech • Swift Package Manager • XCTest • Fastlane • App Store Connect
Architecture	MVVM • Clean Architecture • Dependency Injection • Protocol-Oriented Design • SOLID • Design Patterns
Backend	Spring Boot • Spring Security • Node.js • Express.js • REST APIs • JPA • Hibernate • Microservices • OpenAPI
DevOps	Docker • GitHub Actions • CI/CD • Redis • PostgreSQL • Liquibase • VPS Deployment • OpenVPN
Security	JWT • OAuth 2.0 (PKCE) • SSL Pinning • End-to-End Encryption (AES-GCM, ECDH) • TLS/HTTPS
Realtime & Search	Elasticsearch • WebSocket (Socket.IO) • Server-Sent Events (SSE)

WORK EXPERIENCE

macOS Developer Intern | Enqura

Istanbul, TR • Jul 2026 – Aug 2026

AIChat – Native macOS AI Client • Swift, SwiftUI, Core Data, OAuth 2.0, Keychain, SSE, AVFoundation, libgit2

- Built AIChat, a native macOS AI chat client in SwiftUI: multi-conversation management, real-time streaming, Markdown/code rendering, and multimodal file attachments (images, PDF, JSON, CSV) with content extraction and in-app previews
- Architected a protocol-oriented, provider-agnostic four-layer design (Presentation / Domain / Data / Infrastructure) and extracted core features into a reusable AIChatSDK Swift Package, shipped as source and arm64/x86_64 XCFramework with public APIs for theming, branding, and provider management
- Developed SSE-based streaming for OpenAI-compatible APIs (OpenAI, Gemini, Ollama, LM Studio, custom endpoints), backed by Core Data persistence with search, cascade deletes, and recovery of interrupted streaming responses
- Implemented Google sign-in with OAuth 2.0 Authorization Code + PKCE; secured tokens and API keys in the macOS Keychain
- Created a sandbox-compliant, project-aware Code Mode with libgit2 (no shell execution): reads repository status, branches, and diffs; masks sensitive data in AI context; applies AI-suggested changes only after diff preview
- Added on-device push-to-talk, speech-to-text, and text-to-speech (Apple Speech, AVFoundation); wrote ~170 unit/UI tests covering OAuth, SSE, Core Data, streaming lifecycle, and SDK public APIs

Software Engineering Intern | Aselsan

Sivas, TR • Feb 2026 – May 2026

- Delivered a full-stack real-time chat system (Angular, Node.js, Socket.IO) with JWT authentication, achieving <50 ms message latency under load
- Implemented end-to-end encryption (AES-GCM + ECDH key exchange) for all client-server traffic, eliminating plaintext exposure of sensitive payloads
- Built an Elasticsearch document search system with PDF parsing and OCR pipelines enabling full-text search over 1,000+ classified documents; improved query relevance scores ~40% by optimizing index mappings
- Containerized all services with Docker and configured TLS/HTTPS certificate management for a secure multi-service environment
- Reduced average debugging time for network and certificate issues ~30% through structured logging and monitoring

iOS Developer Intern | Enqura

Istanbul, TR • Jan 2025 – Feb 2025

- Hardened network-layer security with SSL pinning and secure communication protocols; built network control classes and logging to streamline debugging

iOS Developer | Detaysoft

Sivas, TR • Dec 2022 – Jun 2024

- Developed and shipped scalable iOS apps (Swift, SwiftUI, UIKit; MVVM), owning end-to-end App Store deployment
- Resolved memory-management and performance bottlenecks in CoreData and Realm data layers

PROJECTS

TripMate – Travel Planning App | iOS · Backend · DevOps

App Store: apps.apple.com/tr/app/tripmate/id6761005038

- Published a production travel-planning app on the App Store (SwiftUI, MVVM): AI-powered itinerary generation, multi-source place discovery (Google Places, Geoapify), social features, Google/Apple Sign-In, and support for 4 languages
- Designed and operate a Spring Boot backend with JWT + refresh tokens, PostgreSQL, and Redis caching, deployed with Docker Compose on a self-managed VPS; self-hosted an OpenVPN server for secure access to production infrastructure
- Automated build, test, and release with a GitHub Actions CI/CD pipeline; validated core user flows with XCTest unit and UI tests
- Own the full App Store lifecycle: provisioning, versioning, release notes, production releases, and ASO across 4 languages

Auth Service – Authentication & User Management | Backend · DevOps

GitHub: github.com/kayailkerugur/AuthService

- Built an authentication microservice (Spring Boot, Spring Security): registration, email verification, JWT + refresh tokens, password reset, and 30-day delayed account deletion
- Implemented a Redis-based token blacklist for logout/invalidation, transactional emails with Thymeleaf templates, and clean DTO-Entity mapping with MapStruct

EDUCATION

B.S. Computer Engineering | Sivas Cumhuriyet University

Graduated Jul 2026

Double Major – Electrical & Electronics Engineering | Sivas Cumhuriyet University

Expected Jul 2027
